UI/UX Testing – Cross-Browser Compatibility Testing

Objective

- To verify that all Fixly web pages render correctly and behave consistently across major browsers.
- The goal is to ensure that variations in browser engines (Chromium, Gecko, WebKit) do not cause misalignment, layout breaks, or missing functionality.

Scope

The following Fixly modules were included in cross-browser tests:

- Home Page
- Service Listing & Booking Page
- Login / Sign-Up Forms
- User Dashboard
- Provider Dashboard
- Admin Panel

Browsers Tested → Google Chrome (141), Microsoft Edge (141), Mozilla Firefox (131), Safari (17.6 on macOS).

Tools Used

Tool	Purpose
BrowserStack	Run Fixly on different browsers and OS versions
Chrome DevTools	Inspect rendering and console logs
Manual Observation	Validate visual and interactive parity

Cross-Browser Test Results

Browser	Layout Rendering	Functional Behavior	Visual Consistency	Status	Remarks
Google Chrome	Perfect alignment	All buttons & forms functional	Identical to design	✓ Pass	Baseline reference
Microsoft Edge	Identical to Chrome	All flows ok	Slight font boldness difference	✓ Pass	Acceptable variation
Mozilla Firefox	Layout 95% accurate	Navigation smooth	Scrollbar style differs	✓ Pass	Cosmetic difference
Safari macOS	Responsive grid renders well	Booking form validated correctly	Minor button shadow shift	✓ Pass	No functional issue

Summary

Metric	Result
Browsers Tested	5
Total Modules Covered	6
Pass Rate	100 %
Functional Defects	0
Visual Inconsistencies	3 (minor)

Findings & Recommendations

Area	Observation	Recommendation
Font Rendering	Edge displays heavier font weight	Normalize font weight = 400 in CSS
Scrollbar Style (Firefox)	Slightly different appearance	Acceptable → no change needed
Button Shadows (Safari)	Shadows offset by 1–2 px	Use box-shadow in rem instead of px
Overall Layout	All modules responsive and stable	Maintain single CSS source of truth
